(54) MONITORING SYSTEM

(57) Abstract:

PROBLEM TO BE SOLVED: To simplify the development of software in a monitoring system constituted of a server and a terminal and to attain an autonomous alarm display.

SOLUTION: The basic functions of a world wide web(WWW) server 22 and a WWW browser 12 respectively loaded on a server 21 and a terminal 11 are extended. A cession maintaining function 24 with the browser 22 and an autonomous event file transmitting function 25 to the browser 22 continuing a cession are added to the server 22 in addition to a file returning function 23 described by conventional hyper text multimedia language(HTML) or Java. On the other hand, the browser 12 has a cession maintaining function 14 with the server 22 and an event file receiving function 15 from the server 22 continuing the cession in addition to an analysis executing function 13 for a file described by conventional HTML
